

## Farm-specific Agricultural Drought Monitoring from Space

Better timing and loss prevention of your harvest

- We check 2-3 months before harvest if your farm will be impacted by drought
- RSS GmbH & WaMoSpace use optical and hydro-gravimetric satellite monitoring data paired with past production data from your farm, to deliver farm-specific early drought warning with a resolution of 1\*1 km

Better drought prediction enables you to optimize the use of fertilizer, pesticides & irrigation, saving you money and work

What you get:

1. Monthly report & map indicating the drought status of your farm
2. Prediction of drought evolution within the coming 30-days for your farm
3. Regional total water storage depletion/recharge trend in your district
